

DSA MARATHON

Loops Practice Set — Medium Level

Coding Problems (Questions Only)

1. Prime Numbers in a Range

Write a C++ program that takes two integers L and R as input and prints all prime numbers between L and R (inclusive).

2. Strong Number Checker

Write a C++ program to check whether a given number is a Strong Number. A Strong Number is a number whose sum of the factorials of its digits equals the original number.

3. Floyd's Triangle

Write a C++ program that takes an integer N and prints Floyd's Triangle using nested loops.

4. Reverse and Palindrome

Write a C++ program that reverses a given integer using loops and checks whether it is a palindrome.

5. Frequency of Digits

Write a C++ program that counts and prints the frequency of each digit (0–9) present in a given integer without using arrays or STL containers.
